EXPERIENCE

Software Engineer <i>JFrog</i>	Apr,2025 – Present <i>Bangalore, India</i>
- Collaborated with Artifactory Gadgets team to implement Webhook APIs in Spring Boot (Java), enabling non-admin webhook creation and updates for Artifactory, Docker, and artifact property events, including subscription validation, authorization checks, and event handling - Integrated Artifactory event triggers with Java/Spring Boot-based worker services to process upload, download, and copy events - Developed Groovy-based end-to-end (E2E) tests covering the complete Artifactory-to-worker workflow (microservices), ensuring correct event triggering and processing, and wrote unit test cases to achieve over 95% code coverage, ensuring a high-quality, reliable, and maintainable codebase - Enhanced error-handling protocols in TypeScript-based worker services, decreasing the number of unrecoverable exceptions by 35% and improving system resilience - Led development of the Smart Archiving (SH) Management UI for self-hosted enterprise customers using Vue 3, TypeScript, and REST APIs, enabling configuration and management of archival policies through an intuitive, scalable user interface - Spearheaded migration of critical frontend modules from Vue 2 to Vue 3, leveraging the Composition API, improving application maintainability and increasing frontend performance by 20–30%	
Software Development Engineer <i>Vidyuttech</i>	Mar,2024– Apr,2025 <i>Bangalore, India</i>
- Led the Vidyut App by implementing push notifications using OneSignal with support for five languages, improving user communication and engagement - Reduced API latency by 150 ms by refactoring inefficient Java code in the Vehicle-Data LMS team, resulting in faster loading times for users accessing vehicle information - Spearheaded the development and maintenance of a robust ticketing system (FreshDesk), achieving a 30% increase in user satisfaction and a 25% reduction in system downtime - Integrated a third-party customer support platform, enhancing support capabilities by 40% and reducing average response time by 20% - Revamped the postpaid dashboard architecture, slashing data retrieval latency by 50% and boosting overall user experience scores by 35%; also, achieved zero critical incidents for three straight months - Managed bug fixes and performance enhancements for the Rate Limiter API, improving API response times by 15% and reducing system errors by 10% - Leveraged Java, Spring Boot, MySQL, GraphQL, Jenkins, and AWS S3 for backend development and CI/CD pipelines, ensuring high availability and efficient deployment processes - Led code reviews and mentored 2 junior engineers, ensuring code quality and fostering best practices within the team	
Software Engineer <i>Tekion</i>	Nov,2023– Jan,2024 <i>Bangalore, India</i>
- Collaborated backend development for the Service Menu Platform, deploying 9+ crucial REST APIs that reduced system latency by 20% and enhanced the user experience - Played a key role in backend development by implementing robust and scalable solutions, improving platform performance and achieving a 20% reduction in system latency	
Programmer Analyst <i>Cognizant</i>	Oct,2021– Dec,2022 <i>Pune, India</i>
- Designed and implemented database structures for Comcast Cables, including creation of optimized tables and indexes, improving data organization and retrieval efficiency - Optimized complex SQL scripts and queries, achieving a 60% improvement in processing time and overall system performance	

EDUCATION

D.Y.Patil College of Engineering <i>Bachelor of Engineering in Information Technology</i>	Pune, India <i>Jul,2017 – Jul,2021</i>
---	---

PROJECTS

PopcornTime JPA, Spring Boot, MySQL, IntelliJ, Lombok, Log4j	Jan,2024
- Development of Java application using Spring Boot for managing movie ticket bookings, implementing business logic and RESTful services - Incorporated Spring Data JPA for efficient object-relational mapping with MySQL, improving data consistency and query performance - Spearheaded database schemas and class diagrams using DrawSQL and Mermaid, ensuring a clear, scalable data model supporting 20+ tables and reducing query times by 25%	
E-Commerce Java, Redis, Spring Boot, MySQL	Feb,2024
- Engineered a full-featured eCommerce application with robust search, add-to-cart, and secure payment functionalities using Java - Redesigned application-level caching using Redis, reducing API response time from 150ms to 10ms and improving system performance - Improved payment processing by implementing the Adapter Design Pattern, improving flexibility and maintainability of payment integrations	

SKILLS

- Programming Languages:** Java, Python, SQL, HTML5, Typescript, Javascript, Groovy
- Frameworks & Libraries:** Spring Boot, React, JUnit5, Mockito (Unit Testing)
- Tools & Technologies:** Git, Postman, Jenkins, AWS S3, MySQL, MongoDB, New Relic, JWT, Grafana, Jira, Design Patterns, ChatGPT, CursorAI, Github Copilot
